Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                             밁
                                                                                                                                                                                                                                                                               В
                                                                                                                                                                                                                                             ρ
                                                                                                                                                                                                                                                                                                                                                                                                                                      cc protein (beta-Trop). The protein directs proteins to the proteosome cc degradation pathways. The protein is able to interact with the Vpu protein of human immune deficiency virus-1 (HIV-1), cellular proteins cc IkappaB or beta-catenin (bC) and/or protein Skplp. The protein controls cc proteosomes for degradation. Depending on whether the process is cc inhibited or promoted, the result may be delayed breakdown of CD4 (in cc cases of HIV-1 infection); increased activity of IKB (and thus reduced cativity of NFkappaB) and increased degradation of mutant bC in tumour cc lls, or increased bC survival (and reduced apoptosis) in Alzheimer's cc patients. The beta-Trop protein, and its active peptide fragments, or its concleic acid, are used to screen for anti HIV-1 agents (antivirals), cantitumour agents that disrupt cells, and anti-inflammatory agents that disrupt activation by NFkappaB. Fragments of the protein are also useful for treating osteo-articular inflammaton or acute inflammation
                                                                                                                                                                                                                                                                                                                                                    Query Match

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Qy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                AAB12813
                         The present invention describes an F-box motif protein of ubiquitin ligase SCF complex which promotes the ubiquitination of IkappaB or beta-catenin and is constituted by Skpl protein, Cull protein and a complex (SCF complex) of F-box protein containing F-box motif and WD40 repeat motif and has the amino acid sequence of 45 residues (AAB12811) or one of two 569 residue sequences (AAB12812, which is mouse ubiquitin ligase FWD1 protein) and (AAB12813, which is human beta-transducin repeat containing protein (beta-TrCP)). The F-box protein can be used fo the gene therapy of colon cancer by being recombined to a virus vector.

E3 enhances consider that ion of phosphorylated I-kappa-B, an inhibitor protein of conclear factor kappa-B (NF-kappa-B). Understanding I-kappa-B conclear factor kappa-B (NF-kappa-B). Understanding I-kappa-B condulators of this process for use in treating diseases associated with cartivation of NF-kappa-B. In vitro analysis suggests that deletion of conclear that functions as a dominant negative conclear in vivo. Transient over-expression of delta-beta-TrCP (a deletion mutant) inhibited the degradation of endogenous I-kappa-B-alpha c3 can be used to screen for modulators of NF-kappa-B cativity. E3 and beta-TrCP can be used to modulate NF-kappa-B to treat can finfammatory diseases, autoimmune diseases, cancer and viral infections.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     and also major opportunistic infections, immune disorders, cardiovascular diseases and inflammatory disorders. FBP protein, analogs, derivatives and their subsequences, anti-FBP antibodies are also useful in diagnosis of the disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 their fragments are useful for screening compounds. The compounds are agonists or antagonists, which are useful for treating a proliferative or differentiative disorder in a mammal such as
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Novel nucleic acid for screening compounds useful for treating proliferative and differentiative disorders such as cancer and disorders comprises sequences encoding ubiquitin ligases -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Nucleic acids encoding substrate-targeting subunits of ubiquitin

```

The F-box proteins are a family of ubiquitin ligases (SCF ubiquitin ligases) which can be used for the targetted degradation of a target polypeptide in vivo. Targetted degradation is achieved by expressing the ubiquitin ligase in a cell linked to the interaction domain of the target polypeptide and thereby recruiting the target polypeptide to the ubiquitin ligase. Such methods are useful for decreasing or

Degrading any desired protein in a cell is useful for preventing or treating diseases caused by the presence of abnormal amount of the specific polypeptides, for drug discovery and for gene therapy. Diseases treated include cancer, by degradation of oncoproteins, Huntington's disease, other proliferative disorders and microbial infections. The method provides a quick and easy alternative to gene knockout technology. The target polypeptide can be degraded at all stages, or a specific stage, of development in the

Fragments of CSIGP encoding nucleic acid can be used as hybridisation probe for detecting CSIGP related sequences or allelic variants. Recombinant CSIGP can be produced in host cells by transforming them with genetically engineered vectors. Agonists or antagonists can be used in the treatment of cell proliferative and inflammatory disorders associated with decreased or increased CSIGP expression. CSIGP is used in the diagnosis, prevention and treatment of cell proliferative disorders like arteriosclerosis, cirrhosis, cancer, hepatitis and inflammatory disorders like AIDS, Addison's disease, multiple sclerosis, etc.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present sequence is cell signalling protein-12 (CSIGP-12) encoded by cDNA obtained from Incyte clone 323149 of COLAUCTO1 library. It is expressed in musculoskeletal, gastrointestinal and nervous tissues and found to be homologous to beta-transducin repeats containing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 proliferative

The method is useful for altering the level of p27, cyclin E, Max, Mad, c-Myc, MDM2, p53, Bax, Bad or Bcl-2 polypeptide in a cell. SKP2 and SKP2-like protein levels are useful for detecting tumours, and in monitoring tumor treatment in a mammal. Agents that modulate interactions between SKP and target proteins are useful for

The present sequence is one of 251 novel human polypeptides encoded by a bone marrow-expressed polynucleotide. The polynucleotide and the polypeptide encoded by it are useful in the treatment of various immune deficiencies and disorders. The deficiencies and disorders may be genetic, may be caused by a viral (e.g. HIV), bacterial or fungal infection, or may result from an autoimmune disorder, a coagulation disorder (e.g. haemophilia), inhibition of tumour cell proliferation, suppression of an inflammatory response or treatment of a nervous system disorder such as Alzheimer's disease. The F-box protein can be used for the gene therapy of colon cancer by being recombined to a virus vector.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                F\text{-}box protein of ubiquitin ligase SCF complex which promotes the ubiquitination of <code>IKappaB</code> or beta-catenin -

                                                                                                                                                   Query Match
                                                                                                                                                                                                                                         the target polypeptide and thereby recruiting the target polypeptide to the ubiquitin ligase. Such methods are useful for decreasing or increasing the level of a target polypeptide and for creating and expressing a destabilized polypeptide which is subjected to SCF mediated proteolysis. Degrading any desired protein in a cell is useful for preventing or treating diseases caused by the presence of abnormal amount of the specific polypeptides, for drug discovery and for gene therapy. Diseases treated include cancer, by degradation of nncoproteins, Huntington's disease, other proliferative disorders and microbial infections. The method provides a quick and easy alternative to gene knockout technology. The target polypeptide can be degraded at all stages, or a specific stage, of development in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Targeting degradation of polypeptide useful for treating cancer and other proliferative disorders, involves conjugating polypeptide with using protein ligase or inhibiting ubiquitination using organic
                                                                                                                                                                                                 Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                              polypeptide in vivo. Targetted degradation is achieved by expressing the ubiquitin ligase in a cell linked to the interaction domain of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The F-box proteins are a family of ubiquitin ligases (SCF ubiquitin

Detection of the presence or increased expression of the polynucleotide or the protein it encodes is useful for the diagnosis and/or prognosis of one or more types of cancer. The polynucleotide and polypeptide can be used as nutritional sources or supplements and in the screening of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence is one of 251 novel human polypeptides encoded by a bone marrow-expressed polynucleotide. The polynucleotide and the polypeptide encoded by it are useful in the treatment of various immune deficiencies and disorders. The deficiencies and disorders may be genetic, may be caused by a viral (e.g. HIV), bacterial or fungal be genetic, may be caused by a viral (e.g. HIV), bacterial or fungal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      N-PSDB; AAH89966

An example of such an interaction is between protein kinase C and receptors of activated protein kinase (RACK), esp. RACK-1 (AAR85850). Proteins AAR85951-82 were isolated based on homology with beta-transducin, whereas proteins AAR85882-92 were isolated based on homology with the WD-40 consensus sequence (AAR8593). The proteins were used to construct the peptides AAR84928-R85063 and AAR85786-R85842. The peptides can be used to identify target proteins contg. WD-40 motifs, as modulators of enzyme esp. isozyme, activity of proteins involved in protein-protein interaction and to screen for drugs that will affect the protein interaction and to screen for drugs that will affect the protein interaction and to screen for drugs that will affect the protein interaction and to screen for drugs that will affect the protein interaction and to screen for drugs that will affect the protein interaction and to screen for drugs that will affect the protein interaction and to screen for drugs that will affect the protein interaction and to screen for drugs that will affect the protein interaction and to screen for drugs that will affect the protein interaction and to screen for drugs that will affect the protein interaction and to screen for drugs that will affect the protein and to screen for drugs that will affect the protein and to screen for drugs that will affect the protein and to screen for drugs that will affect the protein and to screen for drugs that will affect the protein and to screen for drugs that will affect the protein and to screen for drugs that will affect the protein and to screen for drugs that will affect the protein and to screen for drugs that will affect the protein and to screen for drugs that will affect the protein and to screen for drugs that will affect the protein and the screen for drugs and the protein and the screen for drugs and the protein and the protein and the protein and the protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New WD-40 (beta-transducin)-derived polypeptide(s) - which alter the activity of a protein, eg. protein kinase C, which interacts with a protein contg. a WD-40 region.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Proteins AAR85851-92 are protein which contain at least one WD-40 (also called beta-transducing homologous) amino acid repeat motifs. The WD-40
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      WD40 repeat region; beta-transducin; protein-protein interaction; drug; intracellular signalling; protein kinase C; homology; motif; modulator; receptors of activated protein kinase; enzyme activity; isozyme; human.

for use in treating diseases associated with activation of NF-kappa-B. I vitro analysis suggests that deletion of the F-box results in a protein that functions as a dominant negative molecule in vivo. Transient over-expression of delta-beta-TrCP (a deletion mutant) inhibited the degradation of endogenous I-kappa-B-alpha in stimulated Jurkat cells, resulting in accumulation of phosphorylated I-kappa-B-alpha. E3 can be used to screen for modulators of NF-kappa-B activity. E3 and beta-TrCP can be used to modulate NF-kappa-B to treat inflammatory diseases,

autoimmune diseases,

cancer and viral infections

This is human E3 ubiquitin ligase (E3), which is homologous to human beta-TCCP, an F-box/MD protein family member. E3 enhances ubiquitination of phosphorylated I-kappa-B, an inhibitor protein of nuclear factor kappa-B (NF-kappa-B). Understanding I-kappa-B degradation via the ubiquitin pathway is useful for identifying modulators of this process

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to human nucleic acids (AAI57798-AAI61369) and the encoded polypeptides (AAM38642-AAM42213) with nootropic, immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide in gene therapy be used to treat diseases of the peripheral nervous contains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       C.N.S disorders. Note: The sequence data for this patent did not form part of the printed \ensuremath{\mathsf{N}}

in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral scierosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Human; nootropic; immunosuppressant; cytostatic; gene therapy; cancer; peripheral nervous system; neuropathy; central nervous system; CNS; Parkhason's disease; Huntington's disease; haemostatic; amyotrophic lateral sclerosis; Shy-Drager Syndrome; chemotactic;
                                                                                                                                                                                   Novel nucleic acids and polypeptides, useful for treating such as central nervous system injuries - \,
